

## **Sikkens Autobase Plus – Argentum Introduction**

Akzo Nobel Car Refinishes has designed Autobase Plus Argentum to refinish alloy wheels. The application of this unique product to wheels or plastic wheel covers will provide a high gloss finish.

Autobase Plus Argentum can provide a variety of wheel colors, from a grey argent to a high-polished aluminum. The user can control the appearance through the number of coats. Old, damaged, or bleached wheels will appear to be new after refinishing them with Autobase Plus Argentum. Additionally, Argentum can be used for many additional items or for custom refinishing.

Autobase Plus Argentum is sold ready-to-spray in the can, with no additional reduction required. It should be applied over BLACK Colorbuild.
