

## R-M Tech Advisor CD

BASF has just extended the R-M® family of business tools. This new R-M Technical Advisor CD (AD2685) is just about as versatile as R-M systems themselves. With just a click or two, you'll get information on all R-M products and applications—any time of the day or night. That means no more gathering up brochures, searching for tech sheets, or tracking down product information.

The R-M Technical Advisor CD has autostart functionality – so just place it into a computer's CD drive and the program's home page will pop up within seconds. From there, the wealth of contained information is only a click or two away.

The program can also be easily placed onto the computer's hard drive. Simply copy the R-M folder and its contents from the CD onto the hard drive or desktop. Then, on the desktop, 'right' click and choose New> and at the top - Shortcut. When the Shortcut dialog box appears, click on 'Browse' and navigate to the R-M folder and select the "index.htm" file. Click 'Next' and name the file 'R-M Technical Advisor" or other suitable name. To start the Technical Advisor, double-click on the desktop shortcut and the program will launch – no CD needed!

Copies of the R-M Technical Advisor (AD2685) can be purchased for \$ 22.95
