

# BASF

The next generation of SmartCOLOR software is here. Thanks to the feedback received, the new functionality will improve the overall user experience.

Collision shops can utilize SmartCOLOR to compare formulas, view product data sheets, mix and reduce color and mix ancillary products such as primers, clears and sealers.

This important software roll-out will be performed in a phased approach. SmartCOLOR now offers a new look and feel, along with several productivity enhancements such as:

- Advanced color look-up capabilities in one screen
- Links to accent, wheel, bumper and interior colors
- Ability to create paint systems
- Paint estimate tool
- Identifies variants with their corresponding COLOR-MAX deck locations
- Compare variants functionality
- Advanced pricing module and many more. . .

The minimum hardware requirements have also changed. Please refer to the instructions prior to installation. This SmartCOLOR version is more robust and provides accurate color retrieval that is simple to use for the end-user. A detailed manual will be available in the next 24 hours in digital format @ [www.buysmarttools.com](http://www.buysmarttools.com).

We are confident the latest software introduction will continue to enhance BASF's color tool offering even more.
