

Discontinuation of Lead Containing Tints for Collision Repair

Effective immediately, DuPont Refinish has discontinued manufacturing the following DuPont™ MasterTint® products:

- 842J Light Yellow
- 844J Medium Yellow
- 851J Bright Orange

These tints contained opaque lead pigments that were needed to match older fleet colors and some collision colors. Color matches that used them are available in lead free versions. All recent model year collision repair colors are matched with pigments that do not contain lead. This has eliminated the need for 842J, 844J and 851J for collision repair
