## Introducing Standex 36oz. Mixing Cup

Standex is proud to announce the introduction of their first ever mixing cups and matching lids. While there are many other mixing cups out there, there's nothing like this one.

Here are some of the benefits you will find in the new Standox mixing cups:

	Design/options	Benefits
1	A flat bottom	By having a flat bottom, mixing is more accurate and easier to mix.
2	Standex mixing ratios	Mix ratios are specific to Standox. So, Standox products can be "properly" mixed.
3	1 Quart size	This is a true 32oz. mixing cup. The cup will hold 36oz. of material. Mixing 32oz. is no problem!
4	Lids	Lids can be purchased separately for paint storage, thus eliminating metal cans.
5	Very clear	Cups are very clear, making mix ratios much easier to read.
6	First ever ratios	Mixing ratios are set up to mix Plasticised or un- Plasticised material.
7	Reusable	Mixing cups may be cleaned and reused. All print is solvent resistant.
8	May be used with waterborne paints	Contamination free, for sensitive water products.

Mix ratios are as follows:

2:1+5-30% Clears, Basecoat and High build fillers
3:1 + 5-30% Sealers and Matting clears
4:1 + 5-30% High build fillers
Oz. – ml + 5-10% for use when mixing waterborne products.

Note: 2:1 and 3:1 ratios may be mixed with Plasticiser for flexible substrates.

AS11-056-N	32OZ. MIXING CUP	100/BOX
E-4885 32OZ.	MIXING CUP LID	25/BOX
