

GUN SET UP PROCEDURE CHANGE

From DeVilbiss regarding the Tekna guns:

"putting too much material on" and "orange peel."

The recommendation is to change the gun set up.

OLD WAY- Open the fluid adjustment all the way out, squeeze the trigger, screw in the fluid adjustment until you feel contact, back out 1/4 turn.

NEW WAY- Close the fluid adjustment all the way, back out 2 1/2 to 3 turns.
