

## *ColorNet® "Reference Chips" on Update #1184*

The January 1184 ColorNet® update will include the first look at our new "Reference Chips." Color chips for automotive manufacturers, just like the chips in the World Color Books, are now on ColorNet®. This exciting innovation provides the distinct advantage of being able to see what the color chips look like while retrieving color formulas, all on the same computer screen.

When you go to Car/Code/Year, you'll have instant access to color chips.

### Steps for ColorNet® Reference Chips

1. Using the F3 Car/Code/Year Tab, select the Manufacturer.
2. Type the model year of the car.
3. Click on Reference Chips.
4. To reduce your search further, select a Paint Code / Year / Model / Application Code.
5. When finished, click the refresh grid to display the chips that are available.
6. Place your mouse/cursor over a specific chip to display the car models that use this color.
7. To retrieve a formula, double-click on the desired chip to retrieve a formula.

Try it as soon as you get your ColorNet® update.
