

Skin Zipper Tips

- Make sure the customer views the CD included with the product. Some of the users jump right to Step 2 and did not fold the end of the skin to the 45 degree angle accomplished in Step 1. When they were advised to do Step One first they found it a lot easier to use.
- Remember, there are various thickness and sizes of door skins, especially on trucks like the Ford F-150 may require a little more time and effort over normal car door skins.
 - Late model Ford Taurus door skins may only have limited Skin Zipper capability due to the design of the door since it has no window frame, many body lines and a unique step on the bottom of the door.
- Here is a note from the inventor that can assist with installing door skins.

Inventor Tim Gerhards has found that the use of 3M Adhesive Remover (and possibly other liquid cleaners) significantly improves the efficiency and reduces the amount of effort needed when using the Skin Zipper.

- Remind your customer to wear ear protection.
