

Technical Data Sheet

HIGH BUILD PRIMER AEROSOL

High build primer aerosol has a superb high build that sands easily. This product has excellent leveling, leaving no coarse finish to sand. Adjustable fan spray tip makes this product easy to evenly apply. Sands in 20 minutes or less depending on temperature and film thickness. Allow 5 minutes flash time between coats. HBPSA1 has good solvent resistance allowing basecoat to be applied directly to primer without sealer. May be applied directly to bare metal on cut-through areas and to properly cleaned and scuffed e-coat. Polyester filler may be applied over sanded HBPA1. Compatible with all basecoat systems. HBPA1 is designed for excellent adhesion to both plastic and metal.

NOTE: Prior to application on TPO and Polypropylene bumpers or other plastics of this type, apply an adhesion promoter for TPO or Polypropylene. Choose the proper adhesion promoter for the type of plastic that you are refinishing.
