

Proper Maintenance of DuPont Refinish MasterTint® Machine

Improper mixing machine maintenance is a major contributor to poor color matches. Follow these simple steps for consistent and reliable performance from your MasterTint® machine.

1. Shake new cans of MasterTint® for 5 minutes on a mechanical agitator before placing the pouring lid on the can. Then place on mix machine for 5 minutes after putting the pouring lid on the can.
2. Turn on the mix machine for 5 minutes in the morning and 5 minutes after lunch.
3. Every time the machine is turned on, ensure that all tints are aligned properly on the mix machine and all agitator lids are turning properly.
4. Clean pouring spouts after each use.
5. Do not add solvent to tints. This will impact tint strength.
